

## reflecta Light Pad A5 Super Slim

With the help of the **reflecta Light Pads** one can correct pictures, enhance sketches or monitor animation drawings. Small picture **slides**, stored in archive sleeves, can be viewed on the **Light Pads** without having to remove them from their casing. **The Light Pad** is an important device in **printing, as well as in film, photo and tattoo studios**. It can be used to place transparent material such as **films** or tracing paper over each other, fixate and then edit them.

While a hobby photographer may hold up a **slide** to the light, the professional or semi-professional photographer will use a **Light Pad** to view his material. For those who use film material (**slides and negatives**) of all types regularly, they will not get around the use of a **light pad**.
